

(i)View Scripting

The (i)View Portal is now supporting scripting capabilities. This gives you the ability to script backups of network equipment such as routers and switches. With the (i)View Portal's monitoring engine you may also monitor for backup success and failure.

With the (i)View Portal's Configuration Template layout, it is a breeze to apply similar configurations across multiple resources in minutes. You simply build a single template based on the type of device you are monitoring, this template can be used for different resources of the same type. The (i)View agent on site gathers the scripting information from the (i)View Portal in the resources configuration template. This information includes the scripting code as well as a schedule in order to run the script. Results of this process are presented to the monitoring agent for logging.

Want to know if something in the device configuration has changed since its last backup? With the (i)View Portal's comprehensive rules, you build a rule to compare backups as well as backup failures and successes.

How it works

Along with the basic monitoring configuration the (i)View Agent retrieves its scripting information from the (i)View Portal. Once it has been downloaded to the agent the scripts are run based on a user defined schedule. When using a backup script a TFTP server is installed on the (i)View Agent so that it may accept the backup file. Left is an example of the process of backup scripts.

The Possibilities are endless...

- Patch Updates
- Automatic File Transfers
- Configuration Change Reporting
- Backups
- Configuration Validation
- OS Updates
- Corrective Actions
- Archiving

CSM is a leader in critical event monitoring, device management, and pro-active network support.

Our integrated products deliver Monitoring, Configuration, Backup and Remote Access services for U.C. and the infrastructure it runs on backed by a first class service organization

24x7 - We're here

CSM allows service providers to afford themselves all of the benefits of having a 24x7 operations center without the investment worry.

Quality Solutions

Our professionals can assist you in developing custom programs to provide monitoring, access and configuration services to your base.

Visible Value

Through our extensive selection of reports and dashboards, you can show value to your customers, while maintaining operational efficiencies.
